APPLICATION VISION

12 AI agents. One finance operations platform.

Finance Agent Command Center

A role-based enterprise application for finance users and administrators

01 Finance

- Finance Admin oversight

02 Structured

- Structured intake and document evidence

03 Rules

- Rules + calculations + Claude narratives

04 Maker-checker

- Maker-checker approvals and audit trail

Built from the 12 use cases in the attached Finance & Accounting presentation

Application information architecture

Dashboard

- KPIs, exceptions, runs, entity filters

Agent Catalog

- 12 use cases and role-based access

Agent Workspace

- Input, validate, analyze, review, history

Approvals

- Exceptions, maker-checker, sign-off

Audit & Settings

- Event trace, policy versions, connectors

Finance Admin dashboard | global overview

12	ALL	PENDING	TRACKED
Finance agent workspaces	Runs by status	Review workload	Audit evidence

Operations worklist

- Agent | Entity | Status | Owner | Created date | Exceptions
- Filters: period, legal entity, business unit, agent, priority
- Drill down to calculation, narrative, evidence and decision

Finance Admin controls

- Manage roles, approval matrix and thresholds
- Monitor Claude runs and data-source health
- View immutable action and approval history

Common end-to-end workflow

01

ENTER

Finance user completes the form and attaches approved evidence

02

VALIDATE

Required fields, duplicates, limits, policy and evidence

03

ANALYZE

Deterministic calculations and Claude explanation

04

REVIEW

Exceptions, policy gates, delegated approver

05

AUDIT

Versioned result, decision, immutable events

Screen-level roles and security controls

Finance Admin

- Cross-agent dashboard, policy versions and approvals
- Tenant/entity-bound metrics and audit monitoring
- Connector health, queue failures and agent governance

Finance user + reviewer

- Preparer launches runs and reviews evidence
- Reviewer decides approve, reject or clarify
- Server-side identity, least privilege and segregation of duties

Prototype uses demo roles; enterprise SSO, server-side RBAC and ERP write-back are future integrations.

01 | AP Invoice Intake, Coding & Approval

Primary user: AP Analyst

Reviewer: AP Approver

User input form

- 1. Supplier
- 2. Invoice number
- 3. Legal entity
- 4. Invoice total
- 5. PO authorized amount
- 6. Received amount
- 7. Tax total
- 8. Proposed GL account

Data intake and controls

- Extract invoice details, compare PO and receipt, assign GL and flag duplicate/tax/policy exceptions.
- Duplicate supplier/invoice
- PO/receipt mismatch
- Missing GL or evidence

01 | AP Invoice Intake, Coding & Approval

Generated result

- Invoice coding proposal, 3-way match and exception/approval routing
- Flags: Duplicate supplier/invoice; PO/receipt mismatch; Missing GL or evidence; Amount validity

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

02 | Expense Audit & Corporate Card Compliance

Primary user: Expense Auditor

Reviewer: Finance Audit

User input form

- 1. Employee
- 2. Merchant
- 3. Claim amount
- 4. Policy limit
- 5. Receipt total
- 6. Receipt provided
- 7. Card transaction ID
- 8. Prior card transaction IDs

Data intake and controls

- Evaluate receipts/card claims for duplicate, policy and anomaly risk.
- Receipt completeness
- Policy limit
- Amount reconciliation

02 | Expense Audit & Corporate Card Compliance

Generated result

• Expense audit findings, reasons and employee clarification draft

• Flags: Receipt completeness; Policy limit; Amount reconciliation; Duplicate card transaction

Claude + finance engine

• Rules and arithmetic run in deterministic Python engine

• Claude explains validated results and drafts reviewable text

• No direct automated finance posting or transfer

• Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

03 | AR Collections Prioritization & Dunning

Primary user: AR Collector

Reviewer: Collections Lead

User input form

- 1. Customer
- 2. Open balance
- 3. Days overdue
- 4. Previous late payments
- 5. Open dispute
- 6. Strategic account
- 7. Promise to pay date / details
- 8. Collection notes

Data intake and controls

- Score aged receivables and draft an appropriate collector communication.
- Overdue aging
- Exposure
- Dispute block

03 | AR Collections Prioritization & Dunning

Generated result

- Collection priority, next-best action and reviewable dunning email
- Flags: Overdue aging; Exposure; Dispute block; Strategic account communication

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

04 | Cash Application & Deductions Resolution

Primary user: Cash Analyst

Reviewer: Cash Application Reviewer

User input form

- 1. Customer
- 2. Payment/remittance reference
- 3. Payment amount
- 4. Candidate invoice number
- 5. Invoice open amount
- 6. Reference verified
- 7. Remittance advice

Data intake and controls

- Match bank remittances to open invoices and identify deductions.
- Invoice reference match
- Amount difference
- Deduction threshold

04 | Cash Application & Deductions Resolution

Generated result

- Match proposal, deduction reason and ERP cash application recommendation
- Flags: Invoice reference match; Amount difference; Deduction threshold; Ambiguous remittance

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

05 | Financial Close & Account Reconciliation

Primary user: Controller

Reviewer: Controller

User input form

- 1. GL account
- 2. Close period e.g. 2026-09
- 3. GL balance
- 4. Subledger balance
- 5. Materiality threshold
- 6. Known reconciling items
- 7. Proposed adjustment rationale

Data intake and controls

- Reconcile GL to subledger and draft exception explanation or journal.
- Balance mismatch
- Materiality
- Evidence gaps

05 | Financial Close & Account Reconciliation

Generated result

- Reconciliation status, variance and draft adjustment journal explanation
- Flags: Balance mismatch; Materiality; Evidence gaps; Preparer-reviewer separation

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

06 | Intercompany Matching, Netting & Settlement

Primary user: Intercompany Analyst

Reviewer: Treasury & Tax Reviewer

User input form

- 1. Sending entity
- 2. Receiving entity
- 3. Currency
- 4. Intercompany AR
- 5. Counterparty AP
- 6. Translation rate
- 7. Matching tolerance
- 8. Transfer-pricing/policy notes

Data intake and controls

- Compare entity-to-entity balances and propose controlled netting.
- Cross-entity mismatch
- FX assumptions
- Transfer-pricing review

06 | Intercompany Matching, Netting & Settlement

Generated result

- Intercompany break analysis and settlement/netting proposal
- Flags: Cross-entity mismatch; FX assumptions; Transfer-pricing review; Settlement authorization

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

07 | FP&A Forecast, Variance & Scenario Planning

Primary user: FP&A Analyst

Reviewer: FP&A Manager

User input form

- 1. Business unit
- 2. Forecast period
- 3. Actual value
- 4. Budget value
- 5. Scenario volume change (%)
- 6. Scenario price change (%)
- 7. Scenario cost change (%)
- 8. Planning assumptions

Data intake and controls

- Evaluate actual/budget differences and parameterized scenarios.
- Variance materiality
- Assumption approval
- Scenario version control

07 | FP&A Forecast, Variance & Scenario Planning

Generated result

• Variance analysis, deterministic sensitivity scenario and management commentary

• Flags: Variance materiality; Assumption approval; Scenario version control; Narrative source trace

Claude + finance engine

• Rules and arithmetic run in deterministic Python engine

• Claude explains validated results and drafts reviewable text

• No direct automated finance posting or transfer

• Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

08 | Treasury Cash Forecasting & Liquidity

Primary user: Treasury Analyst

Reviewer: Treasury Approver

User input form

- 1. Entity
- 2. Currency
- 3. Opening cash
- 4. Expected inflows
- 5. Expected outflows
- 6. Minimum liquidity buffer
- 7. Forecast horizon (days)
- 8. Permitted funding options

Data intake and controls

- Forecast end cash and detect shortfalls before funds movement.
- Liquidity buffer
- Negative projected cash
- Dual authorization

08 | Treasury Cash Forecasting & Liquidity

Generated result

- Cash forecast, funding gap and authorization-dependent liquidity options
- Flags: Liquidity buffer; Negative projected cash; Dual authorization; Bank signatories

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

09 | Revenue Recognition & Contract Accounting

Primary user: Revenue Accountant

Reviewer: Revenue Controller

User input form

- 1. Customer
- 2. Contract ID
- 3. Contract total
- 4. Service term (months)
- 5. Performance obligations
- 6. Variable consideration / modifications
- 7. Relevant contract clauses

Data intake and controls

- Abstract ASC 606/IFRS 15 facts and draft a schedule for review.
- Distinct obligations
- Variable consideration
- Contract changes

09 | Revenue Recognition & Contract Accounting

Generated result

- Preliminary straight-line illustration, obligation checklist and accounting memo
- Flags: Distinct obligations; Variable consideration; Contract changes; Policy review

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

10 | Lease Accounting & Contract Abstraction

Primary user: Lease Accountant

Reviewer: Lease Accounting Reviewer

User input form

- 1. Lessor
- 2. Leased asset
- 3. Monthly payment
- 4. Remaining term in months
- 5. Annual discount rate (%)
- 6. Initial direct costs
- 7. Renewal / termination options
- 8. Lease contract clauses

Data intake and controls

- Extract lease terms and build a preliminary amortization illustration.
- Lease classification
- Discount rate
- Renewal/termination options

10 | Lease Accounting & Contract Abstraction

Generated result

- Indicative PV liability, schedule summary and clause-review checklist
- Flags: Lease classification; Discount rate; Renewal/termination options; Lease modifications

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

11 | Audit Evidence, Controls Testing & SOX

Primary user: Internal Auditor

Reviewer: SOX Reviewer

User input form

- 1. Control ID
- 2. Control owner
- 3. Population count
- 4. Items tested
- 5. Exceptions found
- 6. Evidence references / URLs
- 7. Test procedure / expected control

Data intake and controls

- Test control evidence and produce a traceable exception workpaper.
- Sample bounds
- Exception count
- Evidence lineage

11 | Audit Evidence, Controls Testing & SOX

Generated result

- Control test workpaper, exception rate, missing evidence and remediation request
- Flags: Sample bounds; Exception count; Evidence lineage; Auditor sign-off

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

12 | Financial Reporting, Disclosure & Board Pack

Primary user: Reporting Analyst

Reviewer: CFO / Controller

User input form

- 1. Report name
- 2. Reporting period
- 3. Reported revenue
- 4. Prior period revenue
- 5. Operating profit
- 6. Source dataset / approval ID
- 7. Known disclosures and reporting notes

Data intake and controls

- Generate grounded disclosure/board commentary from approved metrics.
- Approved source references
- Numerical consistency
- Disclosure control

12 | Financial Reporting, Disclosure & Board Pack

Generated result

- Grounded board summary, YoY growth and disclosure review checklist
- Flags: Approved source references; Numerical consistency; Disclosure control; CFO sign-off

Claude + finance engine

- Rules and arithmetic run in deterministic Python engine
- Claude explains validated results and drafts reviewable text
- No direct automated finance posting or transfer
- Approve, reject or clarify with reason and evidence

STATUS: Draft / Validation failed / Pending approval / Approved / Rejected | Save input + model + policy + reviewer trail

Solution architecture | logical components

Web UI

• Admin dashboard and 12 agent workspaces

API & job orchestration

• Validated requests, idempotent queued execution

Business rule engines

• Financial arithmetic, thresholds and policy checks

Claude API

• Explanations, structured extraction, controlled drafts

Approvals & audit

• Maker-checker controls, policy and model lineage

Data & connectors

• Postgres, evidence storage, ERP / banking adapters

Example implementation mapping

Working starter code

- app.py: Streamlit admin, workspaces, approval and history
- modules.py: 12 field contracts and review ownership
- engine.py: rules, calculations and flags
- claude.py: guarded narrative generation
- storage.py: execution and decision records
- tests.py: initial numeric scenario verification

Production architecture target

- Next.js + React + TypeScript frontend
- FastAPI Python service and background queue
- PostgreSQL, object store and audit event stream
- OIDC/SAML, server-side authorization, entity scoping
- Controlled Oracle/SAP/NetSuite/bank adapters
- CI/CD, observability, security and integration tests

Backend API contract and run lifecycle

Suggested endpoints

- POST /api/v1/agents/{key}/runs
- GET /api/v1/agents/{key}/runs/{id}
- POST /api/v1/runs/{id}/reviews
- GET /api/v1/admin/summary
- POST /api/v1/runs/{id}/actions

Persisted state

- Validated original input and evidence references
- Deterministic result + exception reasons
- Claude output, model ID and prompt version
- Approval actor, policy version and disposition
- Action receipts only after certified integration

Claude behavior and guardrails

Claude responsibilities

- Extract information from controlled source text
- Create grounded explanations and human-facing drafts
- Cite data fields and source document references
- Surface ambiguities and missing evidence
- Return structured output for review

Never delegate to Claude

- Accounting entries, final balances or money arithmetic
- Approve its own output or override finance rules
- Initiate transfers, settle cash or post journals
- Invent supporting invoices, clauses or source IDs
- Release external disclosures or customer messages

Implementation phases and acceptance gates

Phase 1 · Starter demo

• 12 forms, sample rule outputs, admin overview

Phase 2 · Enterprise UX

• Next.js screens, uploads, role-specific workbench

Phase 3 · Controls and data

• SSO, RBAC, approvals, PostgreSQL, audit

Phase 4 · ERP connectivity

• Read adapters, evidence, reconciliation tests

Phase 5 · Production readiness

• Finance QA, UAT, security, write permissions

Project scope and readiness | clear boundaries

Included in the starter application

- All 12 workflow forms and basic deterministic checks
- Claude narrative integration with server-side API key
- Review/decision and run history framework
- Admin navigation and run visibility
- Architecture blueprint and implementation instructions

Requires engineering before go-live

- ERP, bank and source-system integrations
- Enterprise authentication, isolation and production audit
- Accounting-standard-compliant certified schedules
- OCR/document processing and validated exception scoring
- Security evaluation, UAT and regulated approvals
